"Multiple copies of PBS2, MRP1 or LRE1 produce glucanase resistance and other cell wall effects in Saccharomyces cerevisiae.";
Yeast 13:199-213(1997).
-! FUNCTION: Not known; overexpression of both LRE1 and PBN1 confers resistance to laminarinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Eukaryotic translation initiation factor 3 93 kDa subunit (eIF3 p93)
                                                                                                                                                                                                                                                                                                                                                                                                    Nature 387:90-93(1997).

-!- FUNCTION: Binds to the 40S ribosome and promotes the binding of methionyl-trnah and mRNA.

-!- FUNCTION: INVOLVED IN TRANSPORT OF PROTEINS TO THE NUCLEUS;
PROBABLY VIA ITS SERINE-RICH ACIDIC N-TERMINAL.

-!- SUBUNIT: eIF-3 is composed of up to 8 different subunits.

-!- SUBCELLULAR LOCATION: Cytoplasmic; mainly.

-!- SIMILARITY: Contains 1 PCI domain.

-!- SIMILARITY: BELONGS TO THE EIF3S8 FAMILY.
                                                                                                                                                                                                                                                        ESTOURNCE FROM N.A.

ö
                                                                                                                                                                                       The present sequence represents a Monkey antibody light chain linked to a heavy chain. The antibody binds to a target structure displayed in and on the cell surface of human gastrointestinal peithelial tumour cells and in a subpopulation of normal human gastrointestinal epithelial tumour cells and trarget structure especially comprises alphasbeta4 integrin. The starget structure especially comprises alphasbeta4 integrin. This is a tumour-associated antigen. The anti-body, and its fragments, are useful for treating onnditions based on anti-angiogenic mechanism in humans. They are useful for treating human metastatic and malignant disease, in vitro, in vivo diagnosis and prognosis of human malignant disease, comprising tumour typing, tumour screening, tumour diagnosis and prognosis and monitoring premalignant conditions. Quantitative in vivo diagnosis is carried out by determining the localization of antibody to tumour deposits in humans
Novel antibody for diagnosis, treatment of human metastatic and malignant diseases, has binding structure for target structure displayed on cell surface of human gastrointestinal epithelial tumor and normal cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA aequences (ABL16176 and the encoded proteins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      odourant receptor; fruitfly; mating; repulsion; flight; insect damage; disease spread; pesticide; insect management program.
                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid detection reagent for detecting 1000 or more
genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                    Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure, SEQ ID NO 20541; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     90.2%; Score 37; DB 4; Length 182; 100.0%; Pred. modulate these receptors cause various behavioural responses such as mating, repulsion or flight. Accordingly, the present invention describes such compounds (both natural and synthetic) that are useful for attracting insects to traps or to localised toxins, for repelling insects from individuals or populated residential areas, or for interfering with the function of olfactory system such that insects are unable to locate food and hosts. As such, these compounds can be used to control insect damage and the spread of disease, and will significantly reduce dependence on toxic pesticides having a direct and immediate impact on coordinated insect management programs. This polypetide sequence is a brosophila melanogaster odourant receptor protein, which is homologous to the African malaria mosquito proteins of the invention.
                                                                                                                                                                                                                                                                                              This invention relates to novel Anopheles gambiae odourant receptor genes and encoded proteins thereof. Specifically, it refers to the isolated genes of the African malaria mosquito that are related to the 'classical' Drosophila odourant receptor genes, and compounds that bind to and
                                                                                                                                                                                               Novel Anopheles gambiae odorant receptor polypeptides and nucleic acid encoding the polypeptides, useful as targets for identifying pest control

This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen binding preferences that bind to IL-12. Sequences AAB39485-B39516 represent human anti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39772-B40063 represent anti-IL-12 CDR3 related amino acid sequences are given in AAB40064-B40067-B40064-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B40067-B400
the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human antibody specific for human interleukin-12 (IL-12) used to treat disorders characterized by aberrant IL-12 expression e.g. Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 complementarity defermining region, CDR; antirheumatic; antiarthritic; antiaclerotic; neuroprotective; antipsoriatic; antiasthmatic; cardiant; antiparastic; antibacterial; immunosuppressive; Crohn's disease; multiple sclerosis; rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; neutralising antibody; interleukin-12; IL-12; antiinflammatory;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Anti-hIL12 antibody light chain CDR2 amino acid sequence SEQ ID 527.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Banerjee S, Tracey DE, Wh

                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           activity and to down regulate expression and activity. The antibodies of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids having the sequences of clones isolated from libraries of different human tissues, useful in recombinant DNA methodologies.
                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Barash SC, Ruben SM;

New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.

Claim 11; SEQ ID NO 1561; 980pp; English

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a laso be used in allabutating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. corplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, carebrovascular disorders e.g. cardiac arrest, carebrovascular disorders e.g. corneal infection, narrest, and isorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage as a food additive or preservative to increase or decrease storage as a food additive or preservative to increase or decrease storage capabilities, fat content lipid, protein, carbohydrate, vitamins, minerall secreted protein of the invention. Note: The sequence represents a novel secreted protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human novel polypeptides and their associated polymucleotides. The polypeptides and polymucleotides are useful in gene cherapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. system disorders), reproductive disorders, nasal polyps and sinuaitis), reproductive disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders, pulmonary disorders, anomaly and hypoplastic left ceg. congenital heart defects, Ebstein's anomaly and hypoplastic left cenal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and spendicitis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial ciffaction) and cancerous diseases. Sequences ABUS599 and ABUS5748 represent human novel polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                New polypeptides and nucleic acids, useful in gene therapy for treating, inhibiting or preventing e.g. neural, immune system, muscular, respiratory, reproductive, gastrointestinal, pulmonary, cardiovascular or

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed corivity of (II) is useful in gene therapy techniques to restore normal certivity of (II) is useful in gene therapy techniques to restore normal certivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and (II) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in the printed and to produce other types of data and products dependent on DNA and casponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and anino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in the printed specification, but was obtained in the printed specification, but was obtained in the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Clock gene Baml2 and expressed clock protein BWAL2 important in clock oscillation mechanism and relating to circadian rhythm, used in diagnosis of and developing drugs for insomnia and other sleeping disorders.
                                                                                                                                                    The present sequence represents MOP9, a novel member of the PAS superfamily, where PAS stands for PER/ARNT/SIM domains. MOP9 CDNA (see AAX58980 was cloned from human brain mRNA. MOP9 displays extended homology to MOP3 (see AAX06291). It pairs with CLOCK and MOP4 (see AAX06292) and binds an E-box element with flanking region specificity. The invention provides novel MOP 2-9 nucleic acids (see AAX5891-88) and proteins (see AAX66299-97). These are useful in a variety of research, diagnostic and therapeutic applications. Several of the MOP8 are alphaclass hypoxia-inducible factors. Others are involved in circadian signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, clock protein BMAL2; brain-muscle-Arnt-like protein 2; insomnia; sleeping disorder; non-24-hour sleep; sleep-phase forward; retreat syndrome; time-zone variation syndrome.

The invention relates to a DNA sequence encoding clock protein BMAL2 (brain-muscle-Arnt-like protein 2). The gene and protein are applicable in diagnosis of and development of drugs for insomnia and other sleeping disorders e.g. non-24-hour sleep, sleep-phase forward or retreat syndrome and time-zone variation syndrome. ABG92865-ABG92879 represent BMAL2 amino acid sequences of the invention. (Updated on 29-AUG-2003 to standardise

Ruben SM Rosen CA, Barash SC,

New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives. WPI; 2001-488783/53. N-PSDB; AAS26173.

Claim 11; SEQ ID NO 1139; 980pp; English

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunossays e.g. radioimmunossays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune classase e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. corneal infection, arrest, cerebrovascular disorders e.g. cardiovascular disorders e.g. corneal infection, cardiovascular disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypetides can also be used to aid wound healing and epithelial cell proliferation, cransplantation, for supporting cell culture of primary tissues, to transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage

The invention relates to human novel polypeptides and their associated polynucleotides. The polypeptides and polynucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. system; lumpus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders, gestrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left reart syndrome), renal disorders (e.g. acute kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and spendicitis), allergic reactions and conditions (e.g. asthma), blood appendicitis), allergic reactions and conditions (e.g. asthma), blood infarction) and cancerous diseases. Sequences ABUS4914-ABUS5699 and ABUS5748 represent human novel polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptides and nucleic acids, useful in gene therapy for treating, inhibiting or preventing e.g. neural, immune system, muscular, respiratory, reproductive, gastrointestinal, pulmonary, cardiovascular or renal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; clock protein BMAL2; brain-muscle-Arnt-like protein 2; insomnia;

The present sequence is that of human aryl hydrocarbon receptor nuclear translocator-4 (ARNT4), a novel basic helix-loop-helix (bHLH)/PAS protein translocator-4 (ARNT4), a novel basic helix-loop-helix (bHLH)/PAS protein that is an important regulator of vascular endothelial call growth factor (VEGF) gene expression, especially in the vascular system. ARNT4

converse with endothelial PAS domain protein 1 (EPAS1, see AAY79161), comprises administering to the hypoxia responsive element of the VEGF gene. A claimed method of inhibiting angiogenesis in a mammal compound which inhibits binding comprises administering to the mammal a compound which inhibits binding comprises administering to the mammal a compound which inhibits binding comprises administering to the mammal a compound which inhibits binding comprises administering to a set vivity can also be used to regulate circadian rhythms, e.g. by forming a heterodimer with Clock, or to treat circadian rhythms, e.g. by forming a heterodimer with Clock, or to treat circadian circal and isorders. Expression of ARNT4 through the methods of gene therapy using ARNT4 bNA can be used to promote new blood vessel formation, to treat peripheral vascular disease, cerebral vascular disease, hypoxic tissue damage, coronary vascular disease, or following transient isobaemic attacks, vascular graft aurgery, balloon angioplasty, circulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Lung cancer-associated polypeptide; cytostatic; emphysema; arelectasis; antiinflammatory; antiasthmatic; non-small cell lung cancer; atelectasis; small cell lung cancer; benign lesion; procancerous lesion; bronchitis; chronic obstructive pulmonary disease; hypersensitivity pneumonitis; interstitial pulmonary fibrosis; fibrosis; asthma; bronchiectasis.
                                                                                                    Modulation of angiogenesis in mammals, useful for treating e.g. atherosclerosis, tumors, wounds, vascular disease, hypoxic tissue damage, ischemia, balloon angioplasty, frostbite, gangrene or poor circulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 36; DB 3; Length 602;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Clock gene Baml2 and expressed clock protein BMAL2 important in clock oscillation mechanism and relating to circadian rhythm, used in diagnosis of and developing drugs for insomnia and other sleeping disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a DNA sequence encoding clock protein BMAL2 (brain-muscle-Arnt-like protein 2). The gene and protein are applicable in diagnosis of and development of drugs for insomnia and other sleeping disorders e.g. non-24-hour sleep, sleep-phase forward or retreat syndrome and time-zone variation syndrome. ABG92865-ABG92879 represent BMAL2 amino acid sequences of the invention. (Updated on 29-AUG-2003 to standardise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Aryl hydrocarbon receptor nuclear translocator-4; ARNT4; human; anglogenesis; antiatteriosclerotic; antitumour; atherosclerosis; tumour; vascular disease; vulnerary; cardiant; vascuropic; cerebroprotective; gene therapy; circadian rhythm.

The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits increased or decreased expression in lung cancer samples. Lung cancer-associated polynucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by administering a modulatory compound identified. The methods are useful for treating lung cancer, such as small cell lung cancer, nor other benign or precancerous lesions, e.g. atclectasis, hypersensitivity pneumonitis, interstitial pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary fibrosis, atchiectasis. Cor diagnostic purposes and as targets for screening for therapeutic compounds that modulate lung cancer, such as antibodies. Sequences the lung cancer, such as antibodies. Sequences
Detecting a lung cancer-associated transcript in a cell from a patient for treating lung cancer, by contacting a biological sample from the patient with a polynucleotide that exhibits increased or decreased expression in lung cancer.
                                                                                                                                                                                                                                                                                                               Claim 27; Page 250; 453pp; English

Clock protein BAML2 (brain-muscle-Arnt-like protein 2) #2. ABG92866 standard; protein; 622 AA. (first entry) (revised) |:||||| 135 GSNYRPS 141

Human; clock protein BMAL2; brain-muscle-Arnt-like protein 2; insomnia; sleeping disorder; non-24-hour sleep; sleep-phase forward; retreat syndrome; time-zone variation syndrome.

(NISC-) JAPAN SCI & TECHNOLOGY CORP.

ö Clock gene Baml2 and expressed clock protein BWAL2 important in clock oscillation mechanism and relating to circadian rhythm, used in diagnosis of and developing drugs for insomnia and other sleeping disorders. The invention relates to a DNA sequence encoding clock protein BMAL2 (brain-muscle-Arnt-like protein 2). The gene and protein are applicable in diagnosis of and development of drugs for insomnia and other sleeping disorders e.g. non-24-hour sleep, aleep-phase forward or retreat syndrome and time-zone variation syndrome. ABG922865-ABG92879 represent BMAL2 amino acid sequences of the invention. (Updated on 29-AUG-2003 to standardise Gaps ; Length 622; 0; Indels Score 36; DB 5; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                    Clock gene Baml2 and expressed clock protein BMAL2 important in clock oscillation mechanism and relating to circadian rhythm, used in diagnosis of and developing drugs for insomnia and other sleeping disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a DNA sequence encoding clock protein BMAL2 (brain-muscle-Arnt-like protein 2). The gene and protein are applicable in diagnosis of and development of drugs for insomnia and other sleeping disorders e.g. non-24-hour sleep, sleep-phase forward or retreat syndrome and time-zone variation syndrome. ABG92865-ABG92879 represent BMAL2 amino acid sequences of the invention. (Updated on 29-AUG-2003 to standardise

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, mimunodeficitiency (CVID) and acquired immunodeficitency (e.g. common variable immunodeficitency and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes novel antibodies that immunospecifically bind to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (I) nucleotide sequences (II) encoding (I); and followed are: (II) and polyclonal matisers or a monoclonal antibody raised to infection. (I) and polyclonal antisers or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of muchogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum. Sequencing of the confenting of the confenting of the detection of drugs to treat or prevent P. falciparum. Sequencing of the confenting of proteins and many parts of the subsequent identification of proteins encoded by the complexity of the parasitic lifecycle, and a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and many parts of the world, and there is a pressing need for represent nucleotide and protein sequences given in the present cepresent nucleotide and protein sequences given in the present property or property or specifically mentioned within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô

metabolite by a fungus. This involves modulating the expression of at least one 28C (ainc binuclear cluster protein) gene in a manner to improve the yield of the secondary metabolite. Methods of the invention may be used for improving the production of the secondary metabolite. Methods of the invention may be used for improving the production of the secondary metabolite e.g. antibacterial (such as beta-lactam), an anti-hypercholesterolaemic (such as lovastin or mevastatin), an immunosuppressant (such as cyclosporin A), an ergot alkaloid (such as ergotamine), an angiogenesis inhibitor (such as ovalicin), a glucan synthase inhibitor, gliotoxin family of compounds, a formulator, a pigment, an insecticide, or an antineoplastic compound. The method results in a decrease in fermentor run-time, a decrease in the size of the fermentor required for the production of equivalent amounts of the secondary metabolite, or a decrease in the biomass required for the production, which translates into decreased water amounts of the production, which translates into decreased in the analog in downstream processing. The sequences given the production and the secondary metabolites are suppressed to the production and the secondary metabolites are suppressed to the production and the secondary metabolites are suppressed that must be handled in downstream processing. The sequences given the secondary metabolites are suppressed to the secondary metabolites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New method for improving the production of a secondary metabolite e.g. antineoplastic agent, ergot alkaloid from a fungus involves modulation of the expression of at least one zinc binuclear cluster protein gene.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromesome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed consists of (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a cubypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders consupplement. (I) consider expression or biological activity. The polypeptide and polynucleotide sequences have applications in disorders considers, forenaics, gene mapping, identification of mutations of and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and canno acid sequences ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from WIPO at the celectronic format directly from W
                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, chromosome mapping; gene mapping; gene therapy, forensic; food supplement, medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                80.5%; Score 33; DB 4; Length 155; 71.4%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABG1575;
           ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel fusion protein (I) that has, at its Neterminus, one or more epitopes that bind specifically to autoantibodies (AAb) againet the islet cell antigen IA2 and, at its C-terminus, one or more epitopes that bind specifically to autibodies (Ab) directed against the glutamate decarboxylase GAD65. (I), also nucleic acid (II) encoding it, vectors containing (II) and transformed calls, are useful for diagnosis and prognosis of diabetes mellitus type I stiff-man syndrome, polyglandular autoimmune syndrome or other autoimmune conditions associated with AAb against GAD65 or IA2. (I) provides a rapid and simple antibodies against both IA2 and GAD65, simultaneously. Unlike known fusions, where the GAD65 component is at the N-terminus, (I) contains, correctly folded conformational epitopes that can react with most MICA autoantibodes. This sequence represents the human autoantibody MICA-9 variable region heavy chain used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
glutamate decarboxylase; diabetes mellitus type I; stiff-man syndrome; polyglandular autoimmune syndrome; autoimmune disorder; IA2; GAD65; variable region; heavy chain; MICA-9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New fusion protein, useful for diagnosis of diabetes type I and other metabolic diseases, is reactive with autoantibodies against both glutamate decarboxylase and islet cell antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; chromosome mapping; gene mapping; gene therapy; forensic;

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed construction of (II) and the second of (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II) (II) is useful for generating antibodies against it, detecting or quantitating a colyppeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and produce applications in colyppeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at
                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                               Claim 20; SEQ ID NO 46111; 103pp; English.
                                                                                                                                           Tang YT;
